PROFESSIONAL SUMMARY

Systems and Computing Engineer (Universidad Nacional de Colombia) who builds SaaS products end to end: Vue and React frontends with TypeScript, Node.js and Python backends, and data in PostgreSQL, Firestore and BigQuery on GCP, Supabase and Cloudflare. Currently builds AI agents (Claude, Gemini, MCP) over real business data on a logistics platform and develops two products of his own: a POS with electronic invoicing and a platform for dental practices. Works with automated testing and container deployments.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), Python, SQL.
- **Frontend & Mobile:** Vue 3 (Pinia), React, React Native, Expo, Tailwind CSS, Vite, PWA, Astro.
- **Backend & APIs:** Node.js, Express, FastAPI, Django, RESTful APIs, Webhooks, SSE, Socket.IO, BullMQ, Supabase Edge Functions (Deno), Gmail API, Microsoft Graph, WhatsApp Cloud API.
- **Applied AI:** LLM agents (Claude via the Anthropic API and Vertex AI, Gemini), Model Context Protocol (MCP), structured outputs with Zod, document data extraction.
- **Data & Cloud:** PostgreSQL (Row-Level Security), Supabase, Firebase (Firestore, Cloud Functions), BigQuery, Cloud Run, Cloudflare Workers, MySQL, MongoDB, Redis, AWS, Docker, Nginx, Caddy, GitHub Actions.
- **Quality & Practices:** Vitest, Playwright, Cypress, k6, JMeter, observability (OpenTelemetry, Prometheus, Sentry), Code Reviews, GitFlow, Scrum, multi-tenant and microservices architecture.
- **Spoken languages:** Spanish (native), English (B1), Portuguese (B1).

PROFESSIONAL EXPERIENCE

Kila | *Junior Software Engineer* October 2026 – Present

Logistics SaaS for importers and freight forwarders.

- Part of the engineering team of a SaaS platform that centralizes its customers' foreign-trade operations; I contribute end to end across frontend, serverless backend and data (**Vue 3, Pinia, TypeScript, Firebase, BigQuery, Cloud Run**).
- I build AI agents into the product with **Claude** (Anthropic API and Vertex AI) and **Gemini**: an assistant that assembles dashboards from live BigQuery data and a first-level support agent that reviews tickets and drafts replies for human approval.
- I give agents access to business data through **Model Context Protocol (MCP)**, **Zod** contracts and streaming responses (SSE), isolating each customer's data with multi-tenant contract tests that block deployment in CI.
- I strengthen the reliability and timeliness of the operational and customs data customers rely on to decide; I halved the data warehouse sync time (from over 2 min to about 1 min).
- I ship operations features such as invoice reconciliation against purchase orders, custom fields for the warehouse module and mentions in the integrated mailbox (**Gmail, Microsoft Graph**), with automated tests across 4 services.

CardioDiagnostico del Sur | *Frontend Developer* January 2024 – August 2024

- Built the institutional website of a cardiology clinic as a Single Page Application with **React** and **TypeScript** (services, financial statements and contact), with strongly typed code.
- Built a 100% responsive interface with **Tailwind CSS** and handled the production release with **Vite** and deployment on Hostinger.
- Made appointment booking easier with a WhatsApp button (prefilled message) and a contact form backed by my own **Node.js/Express** service that delivers messages by email.

Corporate Projects (Freelance / U. Nacional) | *Software Developer* 2022 – 2024

- Integrated SPAs with relational backends and validated their behavior under concurrency with load and stress tests.
- Standardized development and production environments with reproducible **Docker** and docker-compose setups.
- Automated continuous integration and delivery with **GitHub Actions** pipelines.

FEATURED PROJECTS

BREVENTA – Point of Sale and Electronic Invoicing SaaS (own product) 2026

- I develop a multi-company POS in a monorepo: a PWA in **Vue 3**, **Pinia** and **Tailwind CSS**, an API in **Node.js**, **Express** and **TypeScript**, and a **FastAPI** microservice for electronic invoicing with the Colombian tax authority (DIAN; CUFE, XAdES signature), on **PostgreSQL** with per-company Row-Level Security, **Redis**, BullMQ and Socket.IO.
- Prepared operations with **Docker Compose** and Caddy (HTTPS), observability with OpenTelemetry, Prometheus and Sentry, 62 **Playwright** tests for security, responsiveness and accessibility, load tests with **k6** (50 companies) and security scanning with semgrep, gitleaks and trivy.

DENTY – Dental Practice Management (own product, in production) 2026

- Built a PWA in **Vue 3**, **TypeScript** and **Tailwind CSS** on **Supabase** (PostgreSQL with Row-Level Security, Auth, Storage, Deno Edge Functions, pg_cron) and **Cloudflare Workers**: patients, clinical records with odontogram, scheduling, treatment budgets and signed consent forms as PDFs with a SHA-256 hash.
- Integrated a **WhatsApp** assistant with **Gemini** that confirms, books and reschedules appointments, and enforced the business rules in the database: immutable signed clinical notes, audit log and invitation-only access.

HEMODENT – Health Education Mobile App (Thesis Project) 2026

- Developed a cross-platform app (iOS/Android) for patients with hemophilia with **React Native**, **TypeScript** and **Expo** (SDK 57, Expo Router), with offline persistence (AsyncStorage), animations (Reanimated) and reminders through local notifications.
- Designed an interface (UX/UI) that adapts to the patient's age range, with access to dental emergency protocols and a specialized medical knowledge center.

OSP – Overwatch Sentinel Platform (Edge Computer Vision Platform, team project) 2025

- Developed a computer-vision surveillance platform using **TensorFlow Lite** on **Raspberry Pi** (Edge Computing) for object detection and optimized video recording.
- Designed a microservices architecture with backend (**Python/Node.js**), frontend (**React**) and databases (**PostgreSQL, MongoDB**), communicating through RESTful APIs, OAuth2 (Google) and JWT.
- Orchestrated deployment across 5 environments with **Docker**, an API Gateway (**Vert.x**) with the Gatekeeper pattern and a reverse proxy (**Nginx**); validated high availability and fault tolerance with stress tests in **JMeter**.

EDUCATION

B.Eng. in Systems and Computing Engineering | Universidad Nacional de Colombia Graduated: September 2026
Bogotá D.C., Colombia.

Technical Diploma in Computer Systems | POLINTEC December 2016
Puerto Asís, Putumayo.

CERTIFICATIONS

- **Diploma in Software Architecture and Quality (192h, 3 modules):** Universidad Nacional de Colombia. Completed: Cloud-Based Software Engineering and Software Quality. In progress: Large-Scale Software Architecture (ends November 2026).
- **AWS Academy Graduate - Cloud Foundations (20h):** Credly (November 2025).
- **Power BI Basics (8h):** Datly Educación (July 2025).
